Fast Food vs. Student Success: Unpacking the Impact of Diet on Health and Academic Achievement

[Hessa alrumaih,Sheikah alsudairy,Hind alamri]

Introduction (150-words)

[Hessa alrumaih/ Sheikah alsudairy/ Hind Alamri]

With technology changing the landscape of education, AI tools such as ChatGPT are growing in importance. Recent research shows that more than 60% of college students utilise artificial intelligence to support the academic studies, highlighting its increasing impact on educational settings. In a time where having digital skills is important, so understanding how these tools impact student performance and engagement is crucial.

This research will focus specifically on how ChatGPT impacts the writing skills and critical thinking abilities of college students. Our goal is to explore how AI tools affect academic outcomes by analyzing their advantages and disadvantages in educational settings.

In conclusion, this paper suggests that although ChatGPT improves access to information and assistance, it also presents obstacles to individual critical thinking and creativity. Ensuring that students acquire the necessary skills for academic success and future careers requires a proper balance in integrating these technologies into the curriculum.

Research Objectives (50-80 words)

[Danah alhodaibi /names of contributors]

Q1/ How does chatgpt impact on enhancing the students ability to understand a complex subject.

Q2/ What are the differences between students' performance and understanding within a student who frequently uses chatgpt and a student who uses it rarely.

Q3/ In what way does ChatGPT impact students' learning tactics and study habits?

Q4/ Which ChatGPT features do university students find most useful for their learning?

Q5/ What considerations lead students to prefer ChatGPT over traditional alternatives like textbooks or tutoring?

Research Methods (180-words)

[Raghad/names of contributors]

This study will use an approach to examine the negative impact of ChatGPT on university students' performance. The sample will consist of 50 university students who have utilized ChatGPT for academic purposes. Participants will be recruited from various disciplines to ensure diversity.

Data collection will involve process: a quantitative and qualitative survey. The survey will include Likert-scale questions aimed at assessing students' perceptions of how ChatGPT affects their study habits, comprehension, and overall academic performance. Questions will focus on areas such as reliance on AI for assignments, changes in study techniques, and perceived impacts on critical thinking skills.

Data analysis will consist of statistical analysis for the survey results, employing descriptive statistics and correlation analysis to identify trends. The qualitative data from survey will be analyzed using thematic coding to uncover common themes. This comprehensive approach will provide a well-rounded understanding of the issue.

Research Ethics (100-130 words)
