Assignment Structuring and Rationale

- The educational function of the Annotated Bibliography assignment (**AS1**) is to teach students how to source information from academic literature and understand its focus, research methods and main conclusions. Also, AS1 functions to provide background knowledge of a specific topic, which may lead to unique insights. It is by using this background knowledge of a topic that students can produce research questions related to a population's (in this situation students) attitudes towards aspects of the topic.
- The educational function of the Methodology and Results assignment (**AS2**) is to teach students how to collect primary information through quantitative means, namely a survey, and represent it in an essay. Also, AS2 functions to illustrate to students the value of using existing research to formulate novel research questions related to a population's (in this situation students) attitudes to a particular topic.
- The educational function of the Research Poster assignment (**AS3**) is to teach students how to represent research findings through a combination of mediums including texts, images, and oral presentations.
-

AS2, Methods & Results Group Project, Overview

Working in groups you must write a research project essay that must not be less than 1000 words nor over 1300 words and includes the following:

1. A Title
2. An Introduction
3. Research Objectives
4. Research Questions
5. Research Methods
6. Research Ethics
7. Research Results and Discussion
8. A Conclusion
9. A Reference List

AS2 is worth 15 % of the course grade.

See AS2 Criteria and Guidelines for the due date.

AS3, the associated Research Poster and Exhibition, is worth 10% of the course grade.

See AS3 Criteria and Guidelines for the due date.

AS2 Overview

1. **Title** (10 -20 words): develop a dynamic title that is exciting and represents the essence of the research.⁵
2. **Introduction** (130-160 words): write an introduction that highlights the importance of your topic and explains the focus of your research. Also, your introduction should include a clear thesis statement.
3. **Research Objectives** (100-130 words): write a paragraph that explains the research goals.
4. **Research Questions** (50-80 words): write 3-5 relevant research questions that the research aims to answer.
5. **Research Methods** (160-200 words): Write a paragraph that explains the methods that will be employed to achieve the research goals. This should include an explanation of the survey you will use to collect data.
6. **Research Ethics** (100-130 words): Write a paragraph that illustrates your awareness of research ethics and the steps you will take to ensure you obtain consent from your participants.
7. **Research Results and Discussion** (300-400 words): Write a paragraph that explains the results of your survey and what they mean in relation to your topic of focus.
8. **Conclusion** (150-180 words): write an introduction to reiterates your thesis statement, describes your major findings and highlights a future avenue of research.
9. **Reference List** (this section does not contribute to the word count): Write a Reference List (minimum 3) according to the APA style of cited texts.

Title Writing Guide – G1

A title should be descriptive, but at the same time should capture the imagination.

What does this title tell you about the article:

Translation, echoes of the mind or a very deliberate act?: Analysing translation manipulation through the lens of psychology

The article focuses on the way human mind can unconsciously alter the meaning of a text

What does this title tell you about the article:

Ambiguity, Ideology, and Doctrine Propagation in Qur'an Translation

The article focuses of the way different translations are used to promote different beliefs.

Introduction Writing Guide – G2

- An introduction should firstly catch the reader's attention and inform them of the importance of your research topic. Thus, you should identify a catching first sentence that emphasis the importance of your topic. Relevant to this, it is helpful to allude to previous studies that contextualizes your research.
- Also, an introduction contains a thesis statement that explains to the reader the purpose of your research.
- In addition, the introduction should explain the methods your will use to collect data.
- Lastly, an introduction should explain your research's major findings.

Introduction Writing Guide – G2

Your introduction should include the following:

- catching first statements that explain the importance of your topic
- an allusion to previous research on the topic
- a thesis statement that explains the purpose you your research
- a description of your research method
- a statement related to your major findings

Introduction Writing Guide – G2

An example of an introduction written in accordance with the guide:

The advantages of online learning became internationally recognized during the Covid-19 pandemic when it replaced traditional face-to-face learning in schools, universities, and other educational institutions. Also, beyond the pandemic online learning continues to be used and its effectiveness is supported by various studies (see for example Ozerbas & Erdogan, 2016). However, these studies have evaluated online learning based on student grades rather than focusing on how students feel about online learning. In this context the aim of this research is to investigate student attitudes towards online learning. To accomplish this, a quantitative research approach will be used in the form of collecting data from a structured survey sent to student participants. It will be argued that based on the results of the survey, students believe online learning is a more effective learning approach than face to face learning, but they consider it to be less useful in developing their social interactions.
